## Artificial Grass Quick Quote Guide.

Artificial grass is supplied in $2 \mathrm{~m} \& 4 \mathrm{~m}$ wide rolls $\times 25 \mathrm{~m}$ long. The length is cut to the customers specific requirement to the nearest 0.5 m . When calculating the price, please remember to base it on the roll widths, i.e. if you need 3 m wide, you will actually be getting a 4 m wide piece. When calculating the length, we recommend adding on approx. 10\% to allow for the area not being square, if the area is obviously not square, you should base the length on the overall longest length.

For curved areas, you need to fit it into a rectangle in order to calculate the area. Below are 3 examples of the difference between the area needed and the chargeable area;
(a) 1.7 m wide $\times 4.2 \mathrm{~m}$ long ( 7.14 m 2 ) - you will charge for 2 m wide $\times 4.2 \mathrm{~m}$ long $=8.40 \mathrm{~m} 2$.
(b) 3.3 m wide $\times 5.2 \mathrm{~m}$ long $(17.16 \mathrm{~m} 2)$ - you will charge for 4 m wide $\times 5.2 \mathrm{~m}$ long $=20.80 \mathrm{~m} 2$.
(c) 5.1 m wide $\times 8.1 \mathrm{~m}$ long $(41.31 \mathrm{~m} 2$ ) - you need 2 cuts, 2 m wide $\times 8.2 \mathrm{~m} \& 4 \mathrm{~m}$ wide $\times 8.2 \mathrm{~m}=49.20 \mathrm{~m} 2$.

## Customer Guide

How much grass do I need?

Our grass is supplied in $\mathbf{2 m} \& \mathbf{4 m}$ wide rolls by 25 m long which we cut to your required length to the nearest 0.5 m .
Figuring out what size you need if your area is square or rectangular is easy, but can seem daunting if the shape is irregular, but it's not. This chart gives you an indication of three areas and the size of cut you need to order.
In order to reduce waste, see if you can alter the area of your new lawn, so for example if your area is $2.5 \mathrm{~m} \times 4.5 \mathrm{~m}$ you would need a cut $4 \mathrm{~m} \times 4.5 \mathrm{~m}$ resulting in a lot of waste. Could you reduce one dimension by introducing a 500 mm planted area to leave the cut at 2 m wide $\times 4.5 \mathrm{~m}$ long or 2.5 m long $\times 4 \mathrm{~m}$ wide - eliminating waste?
$\begin{array}{ll}\text { (a) You order } \underline{2 m} \text { wide } \times 4.2 \mathrm{~m} \text { long } & =8.40 \mathrm{~m} 2 \\ \text { (b) You order } \underline{4 \mathrm{~m}} \text { wide } \times 5.2 \mathrm{~m} \text { long } & =\mathbf{2 0 . 8 0 \mathrm { m } 2} \\ \text { (c) You order } \underline{2 \mathrm{~m}} \& \underline{\mathrm{~m}} \text { wide } \times 8.2 \mathrm{~m} \text { long } & =49.20 \mathrm{m2} \text { (with } 1 \text { joint) }\end{array}$

Roughly sketch out your garden shape an the graphs below, to see the actual area of grass you need to order. It is advisable for each area to be a single piece to avoid joints, however this is not possible or would result in a lot of waste, it can be joined, just remember to make sure all the pieces have the pile running in the same direction.
